Sample data · Suzzy Glass · Class 10 · on DHI since 1 Jul

Growth

A strong week. Accuracy rose, stress eased after Thursday, and earlier nights are starting to show in your papers.

Day | **Week** | Month

Week of Mon 5 – Sun 11 Oct, compared with the week before

Academic profile

Exams · Desk · Modules

Biology is carrying your marks. Physics is the gap, and it gets the least study time.

Topic accuracy	**71%** +7 pts
Understanding in written answers	**2.9 of 4** +0.4
Recall after 7 days	**66%** +8 pts
Topics mastered	**3** +2

Emotional profile

Mood · Session feelings · Blog

Stress came in around Thursday's Physics paper, then eased. You felt good after most sessions.

Stress level	**Moderate** 2 stressed days, was 4
Felt good after studying	**6 of 9 sessions** +2
Mood swings	**Low** calmer than last week
Check-ins	**7 of 7** every day

Health profile

Meals · Sleep · Habits

Earlier nights and steadier breakfasts. Fruit is the one food group often missing.

Bedtime (usual)	**23:10** 25 min earlier
Sleep	**7 h 20 m** +35 min
Breakfast before 11	**5 of 7** +2 days
Food groups, most days	**4 of 5** same

What DHI connected across your rooms

Patterns in your own data since 1 Jul, not rules

SLEEP → PAPERS

You score higher after earlier nights.

On days after you slept before 23:30, paper accuracy averaged 78%. After later nights it averaged 61%.

Based on 41 days with both logged

FEELING → SUBJECT

Physics sessions leave you drained.

4 of 5 Physics sessions ended with "drained", and Physics is your lowest subject. Shorter sittings with a recall round may help.

Based on 23 Physics sessions

BREAKFAST → FOCUS

Breakfast days are focus days.

You rated your study focus 4.1 of 5 on breakfast days and 3.2 on days without.

Based on 52 days with both logged

Room by room

Open a room to see what it says about you

Exams

Academic

Accuracy up 7 points. Most mistakes are concept gaps in Physics, not careless slips.

71% accuracy

Accuracy, all papers	Understanding (teacher rubric)	Old mistakes now fixed
71%	2.9 of 4	58%
+7 pts	+0.4	+9 pts

Accuracy by subject

Biology	82%
Chemistry	74%
Maths	69%
Physics	48%

Why answers were wrong

Concept not clear	55%
Misread the question	25%
Careless slip	20%

WHAT DHI NOTICED

Torque: wrong 5 times this week, with a hint opened on 4. The idea has not landed yet; a re-teach will do more than more practice.

Your answer speed is steady, so the mistakes are not from rushing.

DHI desk

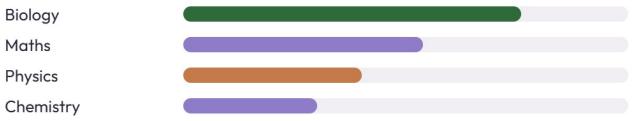

Academic

Most desk time went to Biology, the subject you are already strongest in.

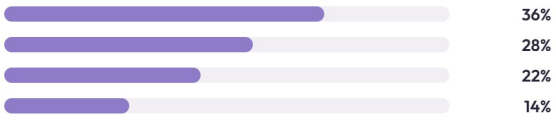

11 sittings

Study days	Sittings	Active learning (quiz, recall, write)
5 of 7	11	64%
+1 day	+3	+12 pts

Which subject your desk time went to

How you studied

WHAT DHI NOTICED

Physics gets 20% of your desk time but has your lowest accuracy. Moving one Biology sitting to Physics is your biggest lever.

Most-asked topic: Photosynthesis, 4 sittings. Most-avoided: Torque, 1 sitting.

Study sessions Academic + Emotional	You felt good after 6 of 9 sessions. Physics sessions felt hardest.	focus 3.8 of 5	⌄
Modules Academic	The leaf-kitchen film shows up in your papers: Photosynthesis accuracy rose after it.	2 kept	⌄
Blog Emotional	Two posts, longer and better organised than your first ones. Your voice is getting clearer.	2 posts	⌄
Mood Emotional	Stress came in on Thursday and Friday, around the Physics paper, then eased by the weekend.	stress: moderate	⌄
Meals Health	Breakfast on 5 days and a steadier lunch time. Fruit is the easiest thing to add.	breakfast 5 of 7	⌄
Sleep and habits Health	Bedtime 25 minutes earlier, and late-night room time more than halved.	bed 23:10	⌄

Mood entries, notes and how you felt after sessions are private to you. Parents see only the summary you choose to share; your school sees class totals, never your entries.

Sample data · Weekly report for parents

Suzzy's week

Mon 5 – Sun 11 Oct · compared with the week before

A strong week. Marks rose, stress eased after Thursday's paper, and she went to bed earlier.

Academic

Exams · Desk · Modules

Accuracy	Understanding
71%	**2.9 of 4**
+7 pts	+0.4

Accuracy and study time, by subject

	Marks	Time
Biology	**82%**	38%
Chemistry	**74%**	15%
Maths	**69%**	27%
Physics	**48%**	20%

What it means: Physics has the lowest marks and gets little study time. Most Physics mistakes are a concept not yet clear (torque), not carelessness.

Mastered this week: Sequences, Moles, Torque basics · 2 modules finished · Teacher remark: "Clear reasoning; label your units."

Wellbeing

Shared by Suzzy

Stress level	**Moderate, lower**
Felt good after studying	**6 of 9 sessions**
Mood check-ins	**7 of 7 days**

What it means: stress tends to arrive the day before a paper, then eases. Physics sessions feel the hardest.

Suzzy chose to share this summary. Her mood entries and notes stay private to her.

Health

Meals · Sleep · Habits

Usual bedtime	**23:10** 25 min earlier
Sleep	**7 h 20 m**
Breakfast before 11	**5 of 7** +2
Food groups, most days	**4 of 5**

What it means: fruit is the group most often missing (2 days of 7). Late dinners fell from 3 days to 1.

Creativity and knowledge

Blog posts	**2, longer than her first ones**
Modules finished	**2 (Biology, habits)**

After the Photosynthesis film, her accuracy on that topic went from 60% to 72%.

What DHI connected

Earlier nights, better papers. After nights in bed before 23:30, her accuracy averaged 78%; after later nights, 61%.

Breakfast helps focus. She rates her study focus higher on breakfast days.

Patterns in her own data since July, not rules.

How you can help this week

1. Ask which part of Physics feels hard, rather than about marks.
2. Keep the evening before Thursday's Maths paper quiet and early.
3. Add a fruit to breakfast.

Sample data · Dhirise Gurukul · Class 10-A · 38 students · trial 21 Sep – 11 Oct

Class report · day 21

Marks rose in every subject except Physics. The class studies Physics least, feels worst after it, and stress peaks the day before Physics papers. One re-teach of torque is the highest-value action.

Download PDF for the principal

Median paper gain, day 1 → 21	Active students	Old mistakes fixed	Counselor sessions held
+14 pts	34 of 38	54%	12
same topics, parallel papers	logged on 15+ of 21 days	up from 31% in week 1	booked by students themselves

Academic profile

Exams · Desk · Modules

Real gains in 3 of 4 subjects. Physics is flat, and it is a concept problem, not effort.

Class accuracy	67% +13 pts since week 1
Understanding in written answers	2.6 of 4 +0.5
Recall after 7 days	59% +14 pts
Topics mastered per student	4 (median)

Emotional profile

Mood · Session feelings · Blog

Stress is tied to the paper calendar. Students felt good after most study sessions, except Physics.

Students checking in	31 of 38
Check-ins stressed or anxious	24% was 31% in week 1
Felt good after studying	63% +9 pts
Students writing on the blog	22 of 38

Health profile

Meals · Sleep · Habits

Sleep and breakfast improved. Late-night study is still common before papers.

Median bedtime	23:25 20 min earlier
Breakfast before 11	4.6 of 7 days +0.9
Students in the room after 23:00	14 of 38 was 21
Food groups, most days	4 of 5

Subjects: study time, marks and how students felt

Joins the DHI desk, daily papers and after-session feedback for the whole class

Subject	Share of desk time	Accuracy, week 3	Felt good after	Change since week 1	Main reason for wrong answers
Biology	36%	78%	81%	+15 pts	Mixing up similar terms
Maths	28%	70%	72%	+12 pts	Careless arithmetic slips
Chemistry	18%	66%	68%	+11 pts	Mole calculations set up wrong
Physics	18%	51%	34%	+3 pts	Torque concept not understood

Topic heat map

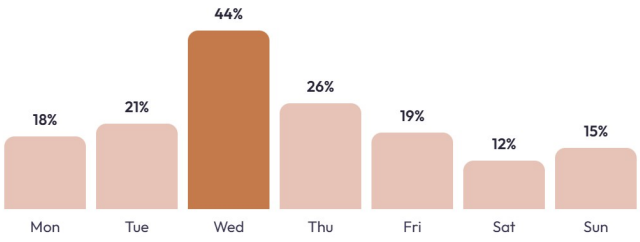

Class accuracy by topic, each week of the trial

Topic	Week 1	Week 2	Week 3	Change
Photosynthesis	48%	59%	72%	+24 pts
Mitochondria	55%	61%	70%	+15 pts
Enzymes	62%	66%	74%	+12 pts
Sequences	45%	58%	69%	+24 pts
Moles	50%	57%	66%	+16 pts
Nephron	40%	44%	51%	+11 pts
Torque	38%	41%	43%	+5 pts

Peach below 50% · gold 50–64% · mint 65% and above.

When the class feels stressed

Share of mood check-ins that were stressed or anxious, by weekday, all 3 weeks

Wednesday is the day before the weekly Physics paper. Stress there is double any other weekday.

Class totals only. Numbers under 10 students are never shown.

What to do next

Students who need academic support

Dipping 2 weeks in a row. A to Z with the reason, not ranked.

1. **Re-teach torque before the next Physics paper**
   Accuracy stuck at 38–43% for 3 weeks; hints used on 70% of torque questions. More practice is not working; the concept is missing.

2. **Move the Physics paper off Thursday, or add a recall round on Wednesday**
   Stress on Wednesdays is double any other day, and late-night room use peaks the same night.

3. **Ask students to give Physics one more desk sitting a week**
   Physics gets 18% of desk time but has the lowest marks; Biology gets 36% and is already the strongest.

4. **Talk about breakfast at the parent meeting**
   Across the class, study-focus ratings are higher on breakfast days.

Dev Kulkarni
Daily papers on time: 5 of 7 → 2 of 7

Ira Bose
Torque accuracy under 40% for 2 weeks

Om Kapoor
No logs in any room for 6 days

Yash Gill
Old mistakes fixed: 45% → 20%

Students who need wellbeing support are with the counselor; their names are not shown here.
